Traffic Safety Corp. Announces the TS1000 Crosswalk System Controller with Enhanced Flash Patterns and Multi-Pattern Mode

Aug. 8, 2007 - Sacramento, CA – Traffic Safety Corp.'s patent pending TS1000 is a next generation crosswalk system controller designed for superior performance, easy installation and outstanding reliability. Superior performance is provided by the TS1000's enhanced flash patterns and multi-pattern flash sequencing mode designed to maximize pedestrian safety by increasing driver awareness and response to warning systems. Ease of installation is facilitated by conveniently located color-coded wiring blocks, LED status lights and digital displays. Reliability is maintained by a combination of I/O surge protection devices, input circuit breakers, output fuses and a watertight NEMA 4 cabinet, and is backed by TSC's industry leading five year warranty. Additional features include an override switch for continuous activation during sports and other high-traffic events, support for pre-warning lights located at a distance from the TS1000 and activation extension mode. Each TS1000 is fully factory tested and burned in prior to shipment.
