## **FOR IMMEDIATE RELEASE**

**Attention Editor**

### **VEHICLE INSPECTION PACKAGES NOW AVAILABLE**

**Under vehicle inspection light packages make security systems easy to order and deploy. Dimming LED fixture options also available.**

Feb. 22, 2011 - Sacramento, CA – Traffic Safety Corporation (TSC) now offers Under Vehicle Inspection light packages for convenient ordering and deployment.

Our TS300 fixtures, connectors, base cans, system controller and handheld inspection mirror combine to create the system package. Long-life, low power, dimmable LED fixtures are available.

A standard package includes 20 fixtures for use on a 25' inspection layout, although any amount of fixtures may be ordered. Choose from a 120/240 VAC halogen or low voltage 15 VDC LED light source. Our LED fixtures are available with optional three-step dimming to reduce glare at night. LED light sources use 94% less power and last 25 times longer than halogen for a long lasting, safer system.

Systems are designed to aid security and safety inspectors by providing high-intensity illumination of vehicle undercarriages. Features include outstanding durability, superior visibility, and low maintenance.

Security applications for the TS300 include: military bases, airports, maritime ports, border crossings, correctional facilities, courthouses and other government buildings. Safety applications for the TS300 include: aircraft inspections at airport maintenance facilities and vehicle inspections at weigh stations.
